

EMPOWERING YOUR BUSINESS

TOYOTA I_SITE

More than fleet management

TOYOTA I_SITE

More than fleet management

Toyota I_Site is a unique combination of technology, information, expertise and support that helps you manage the materials handling issues you face every single day. It involves much more than simply providing you with a fleet management system and leaving you to try and maximise the potential benefits on your own. Our approach is based on an intelligent working partnership where we work with you to deliver tangible benefits over time and in the process help to optimise your materials handling operation.

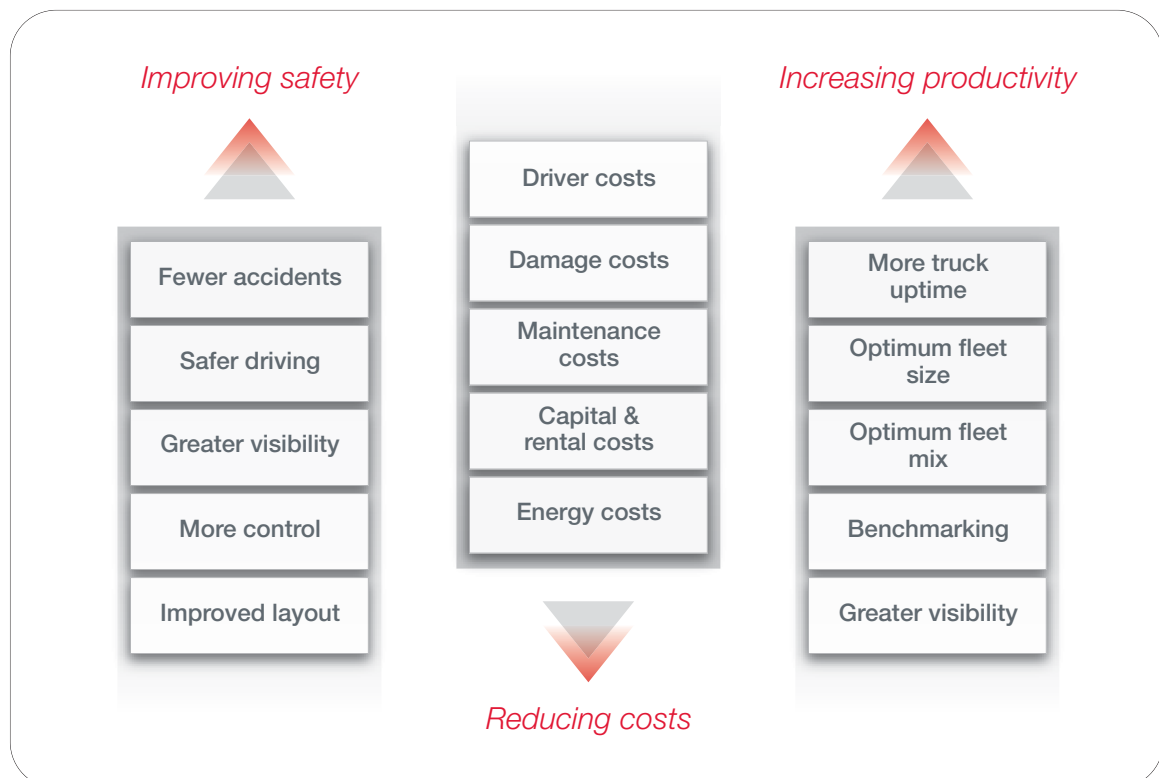

The information and support you need to reduce costs, increase productivity and improve safety

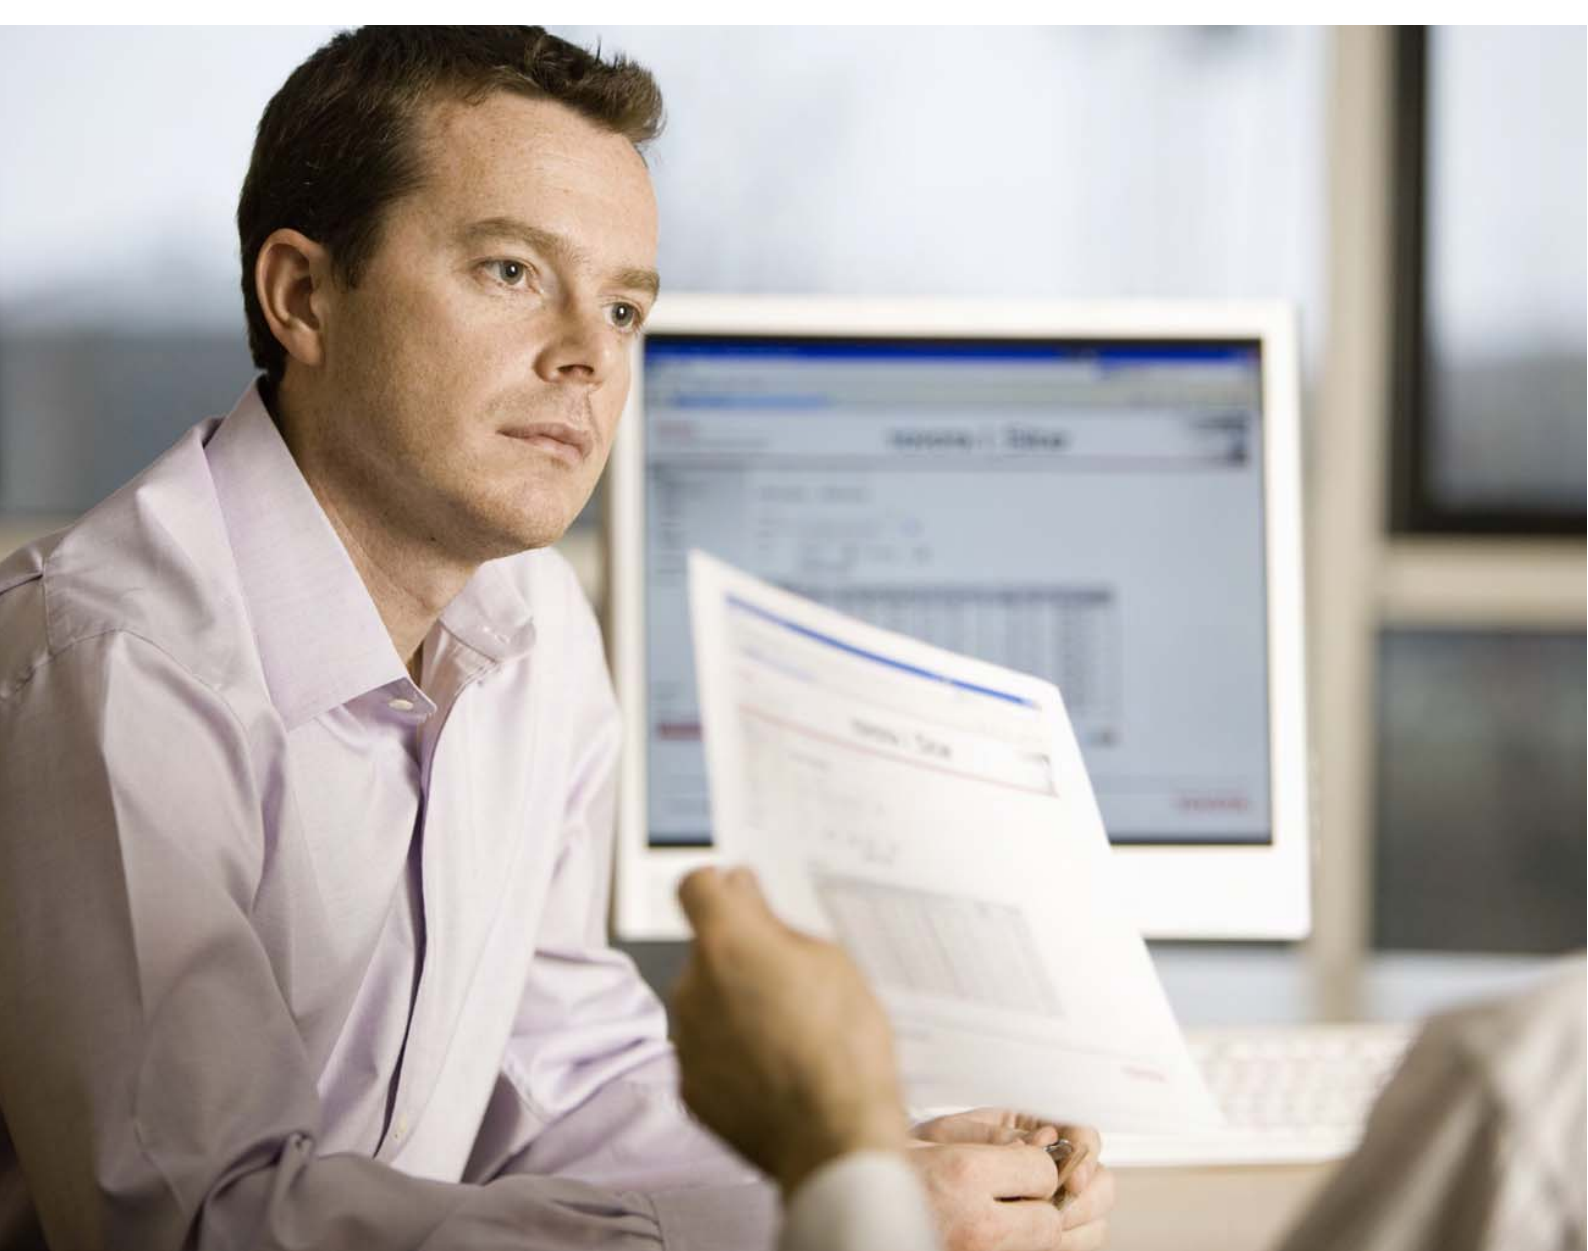

Toyota I_Site provides valuable information and on-going support to give you greater visibility and control of your entire fleet. This will simplify your administration and free your valuable time to focus on other important aspects of your business.

The information we provide comes from two primary sources:

- Our pan-European service database supplies detailed engineering, financial and administrative information about each truck in your fleet.
- Your fleet. Toyota I_Site's state-of-the-art fleet management system will send operational information directly from your trucks using wireless technology, as well as providing security information to control access to each truck.

The support we provide will help you to analyse and use this information to produce positive results in three key areas of your materials handling operations.

More than fleet management

Making a difference

We talk about Toyota I_Site as being 'more than fleet management' – but what exactly do we mean when we say this?

We recognise that just as any information about your fleet can be beneficial, so any fleet management system that provides this information has the potential to deliver valuable benefits. The challenge is to turn this potential into a reality and sustain these benefits over the long-term, even as your operation changes.

That's why Toyota I_Site is not the simple sale of a fleet management system. We see it as an intelligent working partnership where we provide on-going analysis, support and practical advice to empower you to maximize the potential benefits of fleet management over time.

Practical answers

We also understand that running a safe, efficient and cost-effective materials handling operation is not easy. It requires constant analysis and decision-making to control a variety of different costs and operational factors.

- What is my optimum fleet size?
- How can I reduce damage costs?
- Which drivers need additional training?
- How do I control access to my equipment?

You need practical answers to these and many other questions as your operation evolves to keep pace with your customers' changing needs and demands. We will enable you to meet these challenges because Toyota I_Site will provide you with an easier and faster decision-making process.

The thinking behind Toyota I_Site is that of continuous improvement or kaizen – one of the core values of the Toyota way of doing business. With Toyota I_Site you will always have the expertise to turn data into valuable information and decisive action.

Kaizen-the process of continuous improvement

Key benefits

Reducing operating costs

Cut your damage costs by making sure that your trucks are only operated by properly trained and authorised drivers.

- You decide who can use which trucks, and you can easily update this directly from your computer.
- Controlling access will reduce damage to your trucks, infrastructure, equipment and most importantly, the goods you are moving.

You can also monitor and record truck impacts.

- See the 'who, what, when and where' of all truck impacts and make informed decisions about how to reduce them.
- Driver training can be directed to where it is most needed and 'problem' machines can be easily identified and moved to a more suitable operating environment or replaced by a more appropriate truck.

Together, these simple but effective controls reduce operating costs, improve knowledge and bring visibility and accountability to your operations.

Improving safety

Controlling access to trucks and monitoring truck impacts will also help to reduce accidents and improve safety in the workplace.

- Reduce not only the financial costs – more importantly, help to eliminate the human cost of accidents.
- Use the access control function to remotely 'lock-out' any trucks that have a known safety problem until they are safe to operate again.
- Using Toyota I_Site will promote greater operator responsibility and improved driving practices, producing a safer working environment.

Increasing productivity

Monitoring truck utilisation provides an accurate picture of your activity and identifies under-utilised machines and bottlenecks in your operations.

- This could result in relocating some equipment, optimizing the size of your core fleet and managing peaks in activity through short-term rental.
- By constantly monitoring truck usage and operating hours, maintenance can be accurately scheduled to prevent breakdowns, eliminate unnecessary servicing and improve truck availability.

Close to you

Toyota Material Handling Europe aims to be close to every one of its customers, so although we are part of the global leader in materials handling we still focus on acting locally with operations in over 30 countries across Europe. So no matter where your business is located we are never far away, ready with the people, the expertise and the resources to provide you with the services and the solutions you need, when you need it.

With Toyota Material Handling Europe at your side, you will benefit from the same high-quality products and support wherever you are situated. Choose us as your materials handling partner, and discover for yourself how we really are stronger together.
